EDUCATION

B.Tech | Computer Science with specialization in Artificial Intelligence |
Institute of Engineering and Technology, Lucknow | CGPA: 9.46

Expected 2027

EXPERIENCE

LLM Intern

PanScience Innovations LLP

July 2026 - Present

Onsite/ Lucknow

- Developing LLM-based applications using Generative AI, LangChain, RAG pipelines, and vector databases.
- Implementing prompt engineering and AI workflows to build context-aware solutions.

Machine Learning Intern

CodeAlpha

March 2026 - April 2026

Remote

- Developed machine learning solutions by performing data preprocessing, model training, and algorithm implementation using Python on real-world datasets.([View Certificate](#))

PROJECTS

AI Director's Cut | (Generative AI / LLM / Computer Vision)

- Architected a multi-modal video pipeline faster-whisper ASR transcription, OpenCV motion-scoring for scene detection, and a JSON-schema-enforced LLaMA 3.3-70B "AI Director" (Hugging Face) auto-selecting 3-5 optimal clips and narration scripts, with defensive JSON-fallback parsing ensuring 100% pipeline reliability against non-compliant LLM output.
- Built an async FastAPI job-orchestration layer with live-status polling and in-memory model caching, cutting per-video processing startup time by 90% after the first upload; engineered a MoviePy/FFmpeg render engine with automated audio ducking and offline TTS, delivering narrated highlight reels at \$0 inference cost with zero cloud dependency.

Project Link: [View on GitHub](#)

YT-Insight AI | (Generative AI / ML / NLP / RAG)

- Engineered a production-grade conversational AI chatbot enabling natural-language querying of YouTube videos, leveraging a RAG architecture with FAISS vector indexing, HuggingFace Sentence Transformer embeddings, and Qwen 72B LLM via an optimized LangChain pipeline for context-aware, semantically accurate responses.
- Automated transcript ingestion with 3-tier multi-language fallback (English, Hindi, en-IN) via the YouTube Transcript API, and deployed an interactive Streamlit chat UI enabling users to query hours of video content in seconds instead of manual scrubbing.

Project Link: [View on GitHub](#)

COMPETITIVE PROGRAMMING

- GeeksforGeeks: [kunalkanaxvey](#) (Institute Rank-11 | 300+ Problem Solved | Coding Score-1201)
- LeetCode: [Kunal Kanauiya](#) (200+ Problem solved | 100-day batch completed)

SKILLS

Programming Languages

Python, SQL, C++, C

Web Development

HTML5, CSS3, Bootstrap, JavaScript

Generative AI

LangChain, HuggingFace, LLMs, Prompt Engineering , RAG, Groq API

Machine Learning

NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn, NLP, OpenCV

Databases

SQLite, Vector Databases (FAISS)

Tools & DevOps

FastAPI, Docker, Render, Streamlit, Git, GitHub, Jupyter Notebook

Core Subjects

Data Structures& Algorithms, Object-Oriented Programming,
Database Management Systems, Operating Systems, Computer Networks
