EDUCATION

B.Tech | Computer Science (AI Specialization) Expected 2027
Institute of Engineering and Technology, Lucknow | CGPA: 9.46

EXPERIENCE

LLM Intern (Certificate↗) July 2026 - Present
PanScience Innovations LLP *Onsite / Lucknow*

- Architected and deployed a centralized observability stack on AWS EC2 using Prometheus, Grafana, Loki, and Promtail, configuring Linux infrastructure, scrape targets, retention policies, dashboards, and alerting rules for CRM API latency, error rates, and system health to cut incident detection time.
- Containerized observability services with Docker and contributed to the migration to Azure Kubernetes Service (AKS) using Deployments, Services, ConfigMaps, PVCs, and CI/CD pipelines; integrated Azure Event Hubs with a dedicated consumer pod for asynchronous log ingestion into Elasticsearch, decoupling log processing from application requests and improving pipeline resilience.
- Enhanced a telecommunications admin panel with update management, tool assignment, group creation, and configuration modules, streamlining administrative operations; deployed and hosted web applications from source-code archives with secure, reliable public internet access.

Machine Learning Intern (Certificate↗) March 2026 - April 2026
CodeAlpha *Remote*

- Developed end-to-end Machine Learning solutions for real-world problem statements, performing exploratory data analysis, data preprocessing, feature engineering, model selection, training, hyperparameter optimization, and performance evaluation to build reliable predictive models using Python and Scikit-learn.
- Developed and deployed two ML projects: Spam Detection System using TF-IDF and Multinomial Naive Bayes, achieving 98% precision, and 97% recall on 5,500+ text messages; and a Content-Based Movie Recommendation System using NLP-based feature engineering, CountVectorizer, and cosine similarity across 5,000+ movies, with complete implementations documented and maintained on GitHub.

PROJECTS

Vistora | (Multimodal AI / Vision-Language Models / Agentic AI) View Live ↗

- Built and deployed Vistora, a full-stack, AI-powered shopping platform using Python, FastAPI, React.js, Vite and Vercel. It has 10 AI features, including visual product search, outfit detection, a budget outfit planner, a gift recommender and price-drop alerts, and it compares prices across 10+ Indian e-commerce stores (Amazon, Flipkart, Myntra, AJIO) to find the lowest price.
- Implemented a multimodal Generative AI pipeline that integrates LLMs (Google Gemini, Groq), computer vision, CLIP-based image similarity ranking and real-time streaming APIs, with automatic fallback between AI models. This reduced image analysis time by 85%, improved product detection accuracy, and was backed by 280 automated test cases (pytest).

. **Project Link:** View on GitHub

AI Director's Cut | (Generative AI / LLM / Computer Vision)

- Architected a multi-modal video pipeline faster-whisper ASR transcription, OpenCV motion-scoring for scene detection, and a JSON-schema-enforced LLaMA 3.3-70B "AI Director" (Hugging Face) auto-selecting 3-5 optimal clips and narration scripts, with defensive JSON-fallback parsing ensuring 100% pipeline reliability against non-compliant LLM output.
- Built an async FastAPI job-orchestration layer with live-status polling and in-memory model caching, cutting per-video processing startup time by 90% after the first upload; engineered a MoviePy/FFmpeg render engine with automated audio ducking and offline TTS, delivering narrated highlight reels at $0 inference cost with zero cloud dependency.

COMPETITIVE PROGRAMMING & HACKATHONS

- **GeeksforGeeks:** kunalkanaxvey (Institute Rank-11 | 330+ Problem Solved | Coding Score-1225)
- **LeetCode:** Kunal Kanaujiya (235+ Problem solved | 100-day batch completed)
- Participated in **Hack-O-Fiesta** (IIIT Lucknow, Apr 2024), **Smart India Hackathon - SIH** (Lucknow, Sep 2024), and **College Hackathon** (IET Lucknow, Jun 2024)

SKILLS

Programming Languages	Python, SQL, Java, C++, C
Generative AI	LangChain, LangGraph, LangSmith, HuggingFace, LLMs, RAG, Multimodal LLMs, Vision-Language Models (VLM), Prompt Engineering
Machine Learning	Scikit-learn, NLP, OpenCV, PyTorch, CLIP, MediaPipe, NumPy, Pandas, Matplotlib, Seaborn
Backend & Databases	FastAPI, PostgreSQL, REST APIs, Web Scraping, Vector Databases (FAISS, ChromaDB)
DevOps & Cloud	AWS (EC2, S3, Lambda), Azure Kubernetes Service (AKS), CI/CD, Docker, Kubernetes
Tools & Platforms	Git, GitHub, Linux, Jupyter Notebook, Render, Vercel, Streamlit
Core Subjects	Data Structures & Algorithms, Object-Oriented Programming (OOPs), Database Management Systems (DBMS), Operating Systems, Computer Networks
